«The sensitive «ear on the wall».»

Containers for valuables such as vaults, safes and cash dispensers often attract criminal elements. The KSM 412 seismic detector offers reliable and timely protection against attempted burglaries. As a sensitive «ear on the wall» it is extremely precise in signalling attacks on the outer shell protecting valuables.

Selective hearing – repelling attempts at burglary

The KSM 412 seismic detector's crystal microphone picks up the slightest structure-borne vibrations. The sensitive device detects typical break-in noises such as drilling noise, sound waves from oxygen torches or detonations, lightning fast and dependably – and reliably reports them to the intrusion control panel. The inner

workings of the KSM 412 ensure maximum protection against false alarms. The high-tech noise analysis system can be adapted to conditions on the ground with extreme precision. Innocuous vibrations are simply ignored.

Always alert and on its toes

With its self-test functions the KSM 412 is guaranteed to be wide awake around the clock. The device monitors its own functions using regular electrical functional tests as well as tests with integrated or offset test transmitters. Any attempts to sabotage the KSM 412 are doomed from the outset as it instantly detects even sophisticated tampering – and unerringly signals the attempt.

The KSM 412 – the excellent guard for your valuables containers:

Reliable detection of all known forms of attack and tampering attempts

Full-custom configuration

Maximum protection against false alarms

Comprehensive and complete range of accessories

Easy to mount and commission

Tried and tested hundreds of thousands of times, test winner

40 years of experience, unique know-how and Swiss quality from Securiton

Easy to install, quick to commission

Securiton offers the KSM 412 seismic detector with a complete range of accessories. The keyhole protection plate, casing, test transmitter for steel or concrete, floor-mounted box, and welding and adapter plates are all sourced from a single supplier and, in combination, create a perfectly functioning system. This greatly simplifies the installation work.

The detector is as quick to configure as its configuration is precise. It is carried out either on the KSM 412 itself or on a PC using a serial interface. PC configuration allows the customer's specific conditions to be taken precisely into account, ensuring an extremely accurate response behaviour for the KSM 412.

A detector for all applications

When it comes to its applications the KSM 412 is certainly an all-rounder. It watches over vaults, safes and cash dispensers as reliably as it does over night deposit boxes and ticket machines. Depending on the size of the premises and the level of protection required, it is mounted and set either individually or repeatedly thanks to its complete range of accessories: on steel or concrete.

Swiss quality and 40 years of experience

There are countless KSM 412 units operating reliably worldwide. They have been voted overall test winner and «best product» by the renowned «Benchmark Magazine». Securiton has been developing its seismic detectors in Switzerland for over 40 years.
